The area under hay has decreased in all four provinces.

PASTURE.

The area of pasture, including mountain grazing, is returned as 12,439,709 acres in 1916, as compared with 12,353,124 acres in 1915—an increase of 86,585 acres. When considering these figures of pasture area it should be remembered always that there are certain areas which it is difficult to classify, and which one year may be returned as “grazed” land, and another year may be returned as turf bog or barren mountain; but the grazing value of these areas is small. The important increase or decrease in pasture is best measured by the extent to which the area of crops and of hay has decreased or increased, for in such a statistical inquiry as is being dealt with here the extent of the area under crops can be more exactly determined than the area of grazing land.

(II.) NUMBERS OF LIVE STOCK.

The following table shows the numbers of the different classes of live stock on 1st June, 1915 and 1916, and the increase or decrease in the interval :—

* The Poultry figure for the year 1906 is not comparable with those for the succeeding years. It is probable that the marked increase in 1907 and subsequent years is due in a great measure to a more complete record of young birds having been made in those years.

The thanks of the Department are due to the Royal Irish Constabulary and the Dublin Metropolitan Police for the usual efficient manner in which the agricultural statistics have been collected and returned.

I have the honour to be,

Sir,

Your obedient Servant,

THOMAS BUTLER,

*Superintendent of Statistics
and Intelligence Branch.*
